What is OpenModelica? (I)

- Advanced Interactive Modelica compiler (OMC)
 - Supports MLS v. 3.1/MSL v. 3.2.1
- Basic and advanced environments for creating models
 - OMShell - an interactive command handler
 - OMNotebook - a literate programming notebook
 - OMEdit - Open Modelica Connection Editor
 - OMPlot - Open Modelica Plotting
 - OMOptim - Open Modelica Optimization Editor
 - MDT - an advanced textual environment in Eclipse

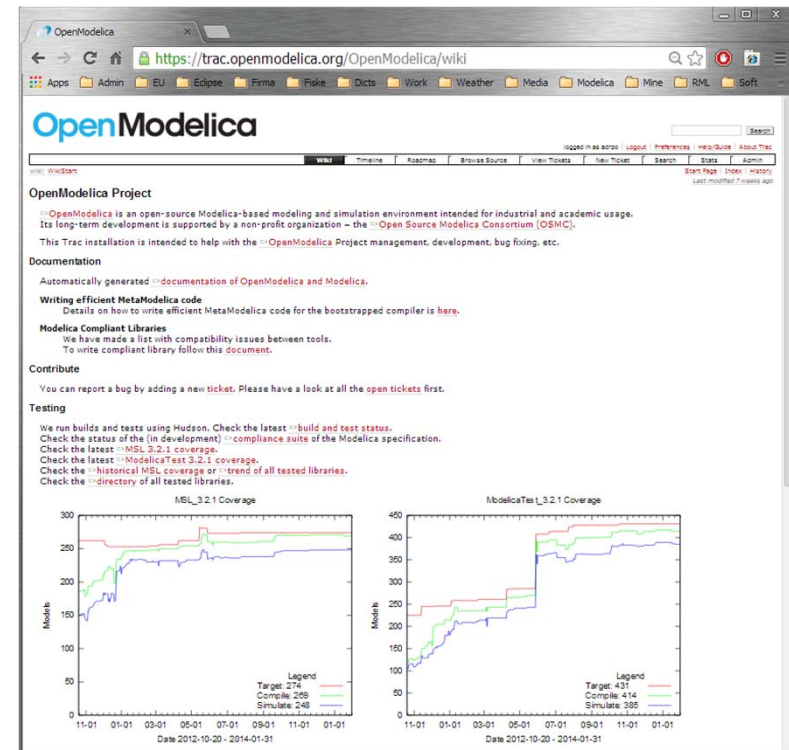

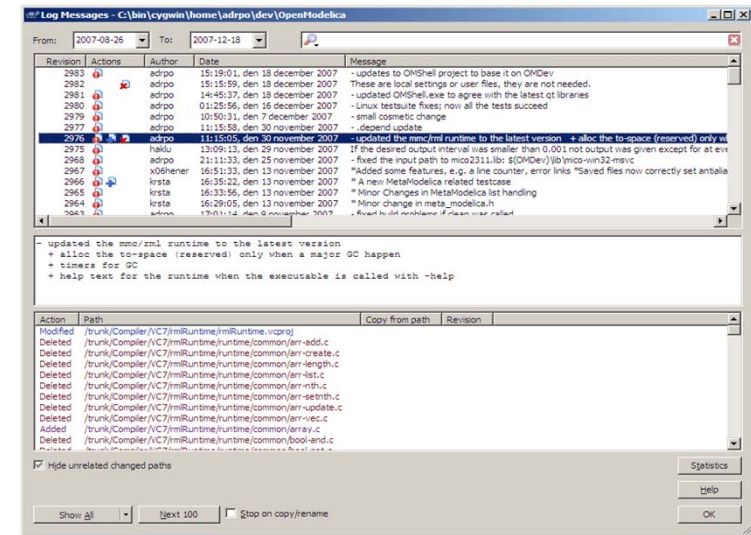

What Is OpenModelica? (II)

- Advanced Eclipse-based Development Environment
- Modelica Development Tooling (MDT) - started in 2005
 - Code Assistance, Debugging, Outline & a lot more
 - *Used heavily for OpenModelica development*
 - Used in many OpenModelica Development Courses
- ModelicaML UML/SysML integration

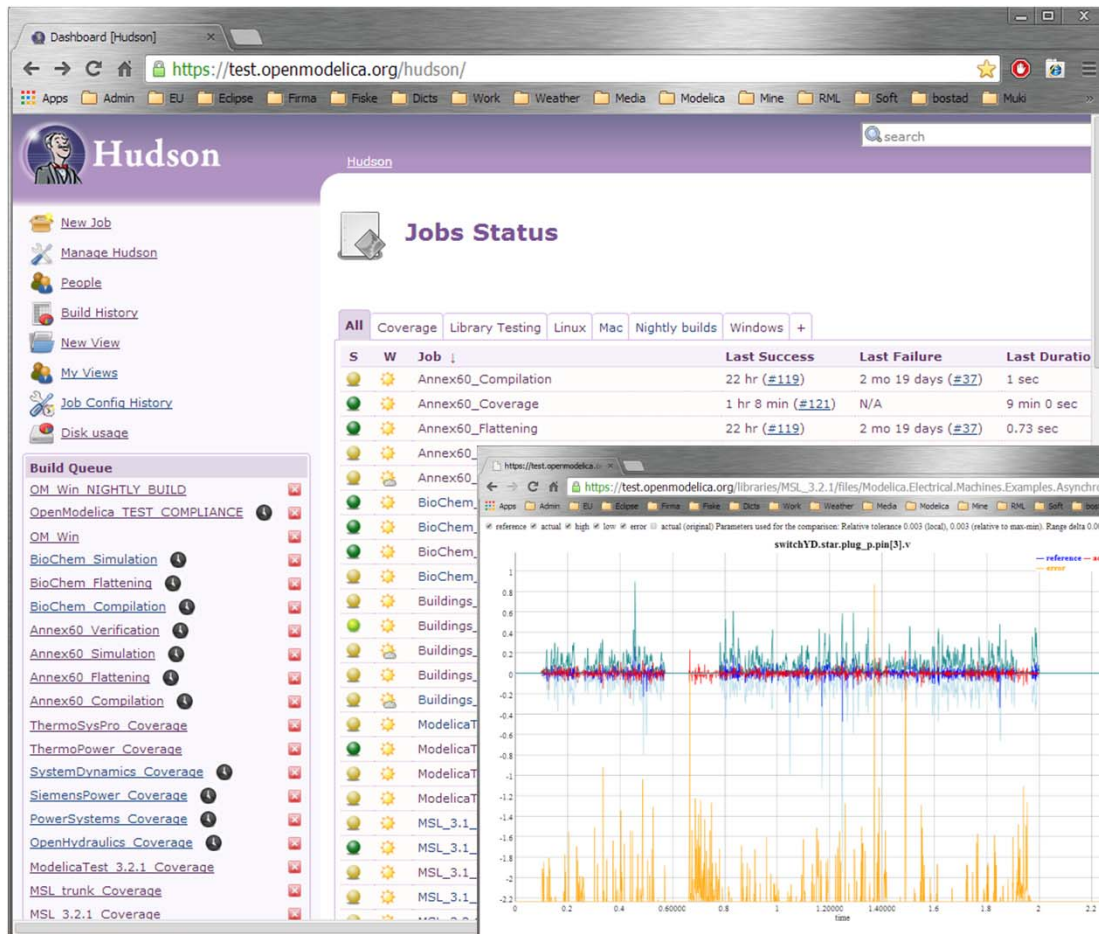

What is OpenModelica? (III)

- Open-source community services
 - Website and Support Forum
 - Version-controlled source base
 - Trac with bug database
 - Development courses
 - Mailing lists

What is OpenModelica? (IV)

- Open-source community services
 - Extensive testing (unit & library coverage: MSL 3.2.1, ModelicaTest 3.2.1, PetriNet, Buildings, PowerSystems, OpenHydraulics, ThermoPower, and ThermoSysPro) with interactive result comparison
 - ~2700 tests ran on each commit via Hudson (3 test servers currently)
 - Linux (GCC & CLANG), Windows (MinGW GCC), Mac OS (GCC)
 - Automatic nightly builds for Window & Linux & Mac OS

What is OpenModelica? (V)

- **An incubator platform for research**
 - 6 PhDs since 2004 (Debugging, Parallelization, PDEs Extensions)
 - 30 Master's theses since 2004
 - Both the students and the project benefit
- **Master theses at PELAB 2006-2014**
 - Refactoring/Parsing and Language extensions
 - UML/SysML view of Modelica code
 - 2D and 3D visualization tools
 - Static and runtime debugging tools
 - Advanced code generation and parallelization of simulation code
 - Bootstrapping and Java Interface
 - Function pointers
 - NVIDIA for Cuda and OpenCL parallel simulation
 - OMEdit - Modelica Connection Editor
 - OMWeb - server based Modelica simulation for teaching
 - OMCcc parser
- **External Master theses**
 - Model based diagnostics at ISY (Dep. Of Electrical Engineering)
 - Monte-Carlo simulation of Satellite Separation Systems at SAAB
 - Interactive Simulations (EADS)
 - Additional Solvers + Event handling (FH-Bielefeld)
 - EADS - ModelicaML
- **A Base for commercial and open source products**
 - MathCore AB, Bosch Rexroth, InterCAX (MagicDraw SysML), VTT, Equa, Evonik

OpenModelica Roadmap - Past

1997 - started as a master thesis

2003 - first usable internal version

2004 - first external version: OpenModelica 1.1

2005 - more development: OpenModelica 1.3.1

2006 - major milestone

- Translated the whole compiler to MetaModelica
- Integrated Development Environment for the compiler
- OpenModelica website started
- Moved the code repository to Subversion management
- Extended the OpenModelica environment with new tools
- 4 versions released during the year
- External people start using OpenModelica
 - ~ 200 downloads/month
 - first development course at INRIA

OpenModelica Roadmap - Past

2007 - continued development and community involvement

- Improvement in website, support and documentation
- Answered ~1000 questions on the forum
- Portability is highly improved, ported to 4 platforms
 - Linux, Mac, Solaris, Windows (version 1.4.3)
- Improvement of the compiler development tools in Eclipse
- OpenModelica Community starts to react
 - contribute code & report bugs & request enhancements & participate in answering questions in the OpenModelica forum
 - participate at courses and workshops
- New server acquired for better community services
- Increased usage: ~600 downloads/month
- Open Modelica Consortium created in December 4
 - 4 months of work
 - 9 organizations as members already (3 Universities, 6 Companies)
 - discussions are ongoing with other 6 companies

OpenModelica Roadmap - Past

2008 - Further work on the compiler

- Release 1.4.4 and 1.4.5
 - Linux, Mac, Solaris, Windows
- New Solver Interface
- Refactoring
- Dynamic loading of functions
- Merging of MathCore front-end code
- 744 commits in Subversion
- Other things I don't remember

OpenModelica Roadmap – Past

2009

- Work mainly happened in OSMC (partially on a non-public branch)
- **Front-end**
 - Refactoring (OSMC)
 - Enumerations (OSMC)
 - Java Interface and Bootstrapping (Martin Sjölund)
 - MultiBody flattening (OSMC)
 - Constraint connection graph breaking (VTT + OSMC)
 - Support for Modelica 3.x and 3.x annotations (OSMC)
- **Back-end**
 - Tearing in the back-end (Jens Frenkel)
 - Template Code Generation and CSharp backend (Pavol Privitzer, Charles University Prague)
 - Interactive Simulations (EADS)
 - C++ Code generation (Bosch Rexroth)
 - Java Interface and Bootstrapping (Martin Sjölund)
 - Additional Solvers + Events (Willi Braun, FH-Bielefeld)
- **General**
 - New ModelicaML + SysML prototype (EADS)
 - 1144 commits in subversion (Since 2009 to February 8, 2010)
 - Bug fixes (OSMC)
 - Release 1.5.0 and 1.5.0-RC_X (Linux, Mac, Solaris, Windows)
- **More things I don't remember**

OpenModelica Roadmap – Past

2010 – 2011

- Support for Modelica Standard Library 3.1 (Media & Fluid in works)
- **Front-end**
 - MultiBody flattening (OSMC)
 - Support for Modelica 3.x and 3.x annotations (OSMC)
 - Performance Enhancements
 - Stream connectors
 - Media & Fluid work is on the way
- **Back-end**
 - Back-end redesign (Jens, Willi, Martin, Per, Adrian, Kristian, Filippo)
 - Tearing in the back-end (Jens Frenkel)
 - Template Code Generation and CSharp backend (Pavol Privitzer, Charles University Prague)
 - Interactive Simulations (EADS)
 - C++ Code generation (Bosch Rexroth)
 - Additional Solvers + Events + Linearization (Willi Braun, FH-Bielefeld)
- **General**
 - OMEdit - new connection editor
 - Bootstrapping OMC (90% finished)
 - 2550 commits in subversion from 2010 to Feb. 7, 2011 (double than 2009-2010)
 - Bug fixes ~300+ (OSMC)
 - Release 1.6.0 (Linux, Mac, Windows)
 - Downloads Windows (~16434) , Linux (~8301), Mac (~2816)
- **More things I don't remember**

OpenModelica Roadmap – Past

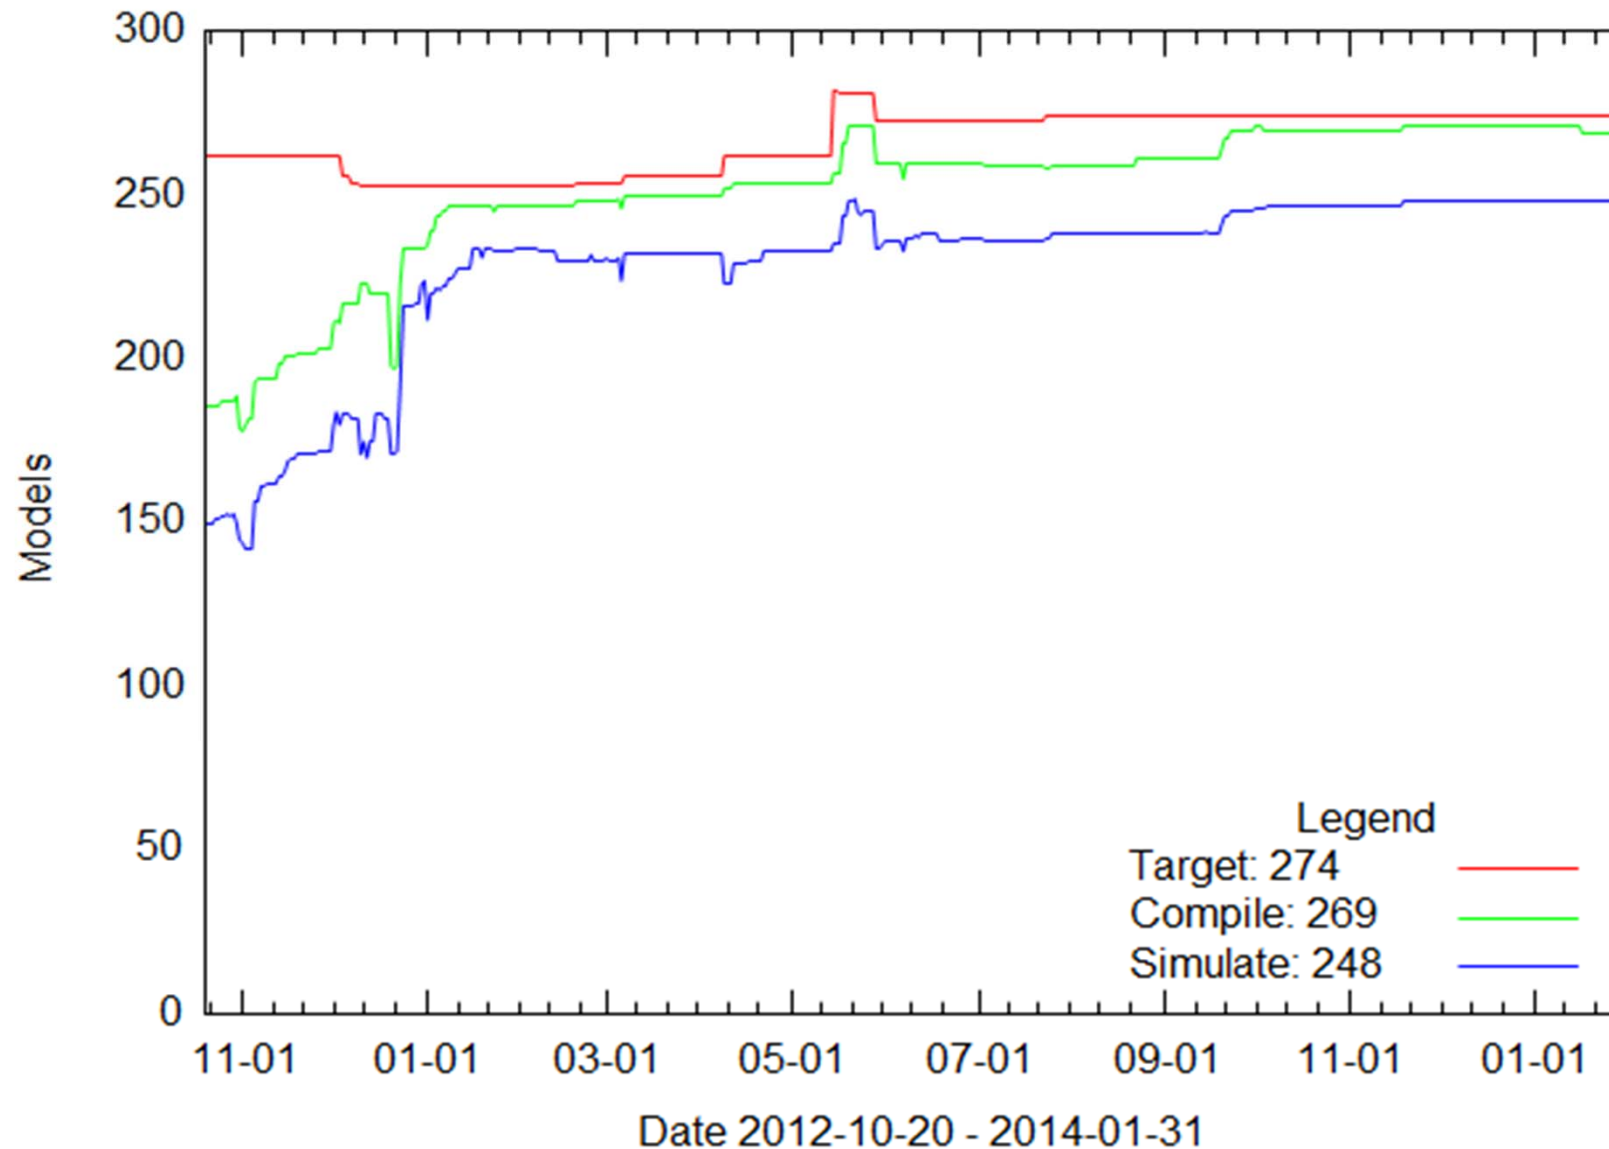

2012 – 2013

- Support for Modelica Standard Library 3.2.1 including Media & Fluid
- **Front-end**
 - Performance Enhancements
 - Media & Fluid work
 - Operator overloading
 - New instantiation module started
- **Back-end**
 - Modular back-end with more optimization modules (Jens, Willi, Martin)
 - New simulation runtime redesign (Willi, Lennart, Jens, Martin, Adrian)
 - C++ Code generation (Bosch Rexroth)
 - FMI export & import
 - Initialization, Jacobians (Lennart Lochel, Willi Braun, FH-Bielefeld)
 - Support for parallelization (Martin)
 - Parallel extensions in functions
- **General**
 - Uncertainties support (OpenTURNS connection & Data reconciliation)
 - MDT GDB debugging based on GDB and the bootstrapped compiler
 - OMEdit - improvements
 - Bootstrapping OMC (100% finished) using Boehm GC
 - 3909 commits in subversion from 2012 to Feb. 4, 2013
 - 2000 forum posts (questions and answers)
 - Bug fixes ~247+ (OSMC)
 - Release 1.9.0 (Linux, Mac, Windows)
 - Downloads Windows (~45307) , Linux (~15543), Mac (~5367)
- **More things I don't remember**

OpenModelica Testing (I)

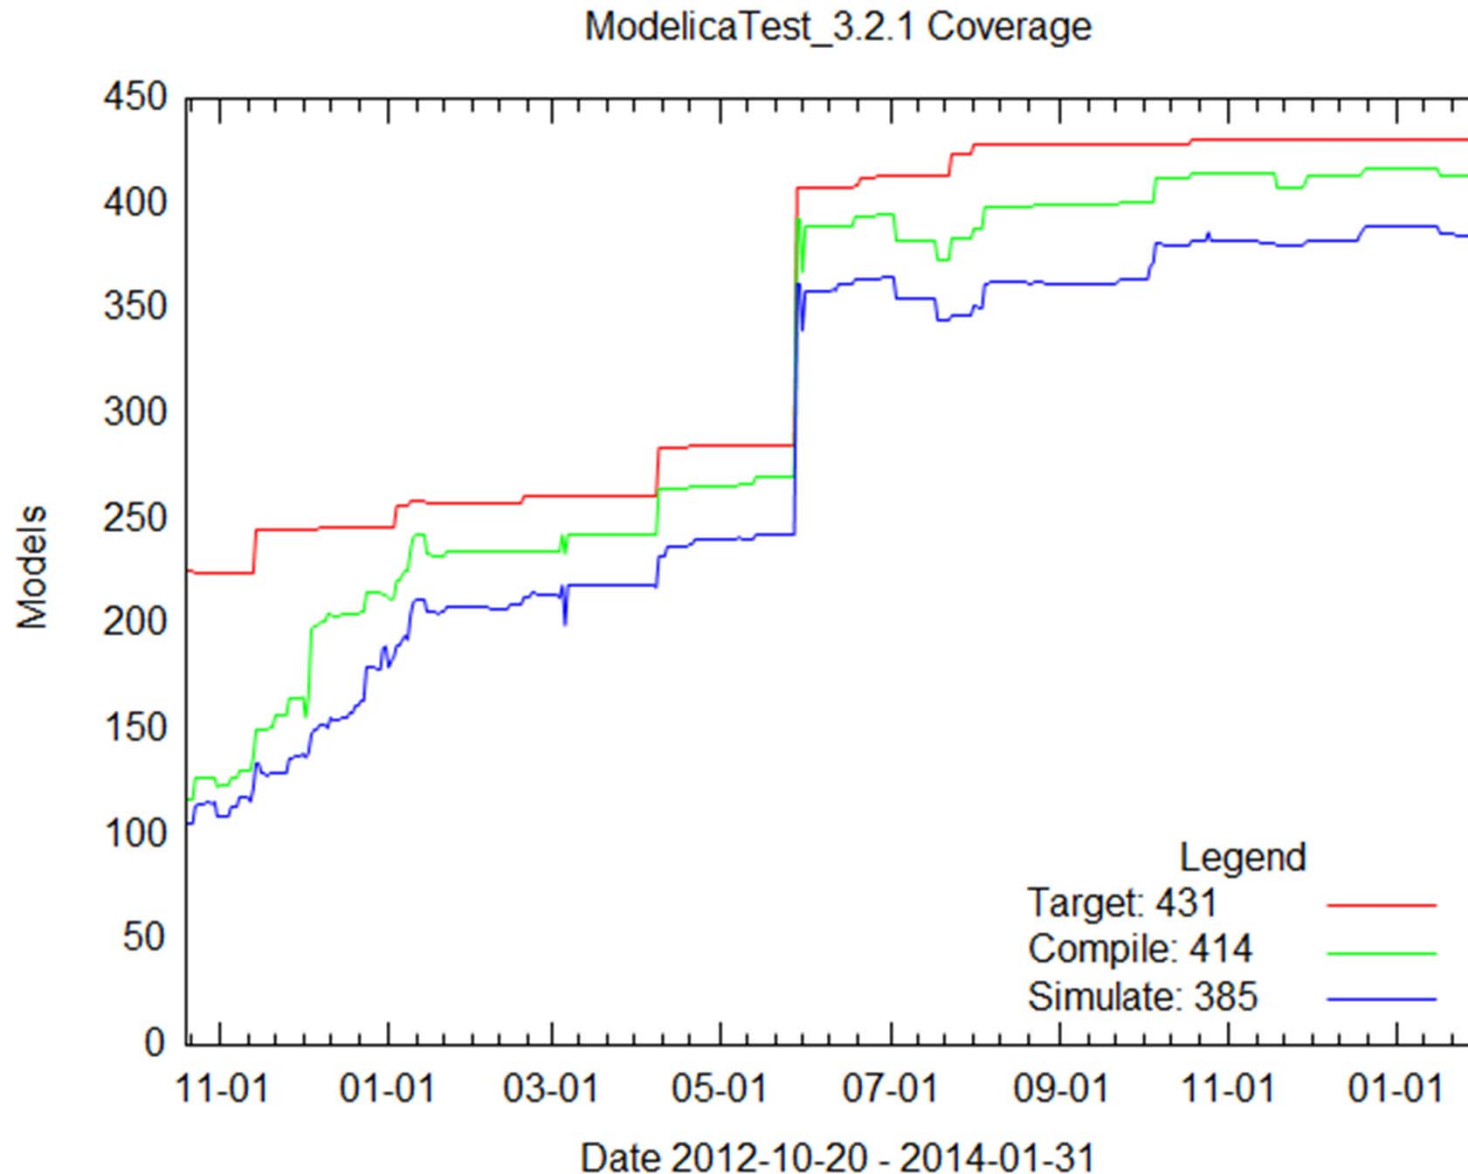

- 2014-02-03 r18909 - total 274 - build 269 (97%) - sim 248 (92%)

MSL_3.2.1 Coverage

OMShell - OpenModelica Shell

```
File Edit View Help
```

OpenModelica 1.4.3
Copyright 2002-2006, PELAB, Linköping University

To get help on using OMShell and OpenModelica, type "help()" and press enter.

```
>> loadModel(Modelica)
true

>> loadFile("C:/OpenModelica1.4.3/testmodels/BouncingBall.mo")
true

>> simulate(BouncingBall, stopTime=3)
record
  resultFile = "BouncingBall_res.plt"
end record

>> plot(h)
true

>>
```

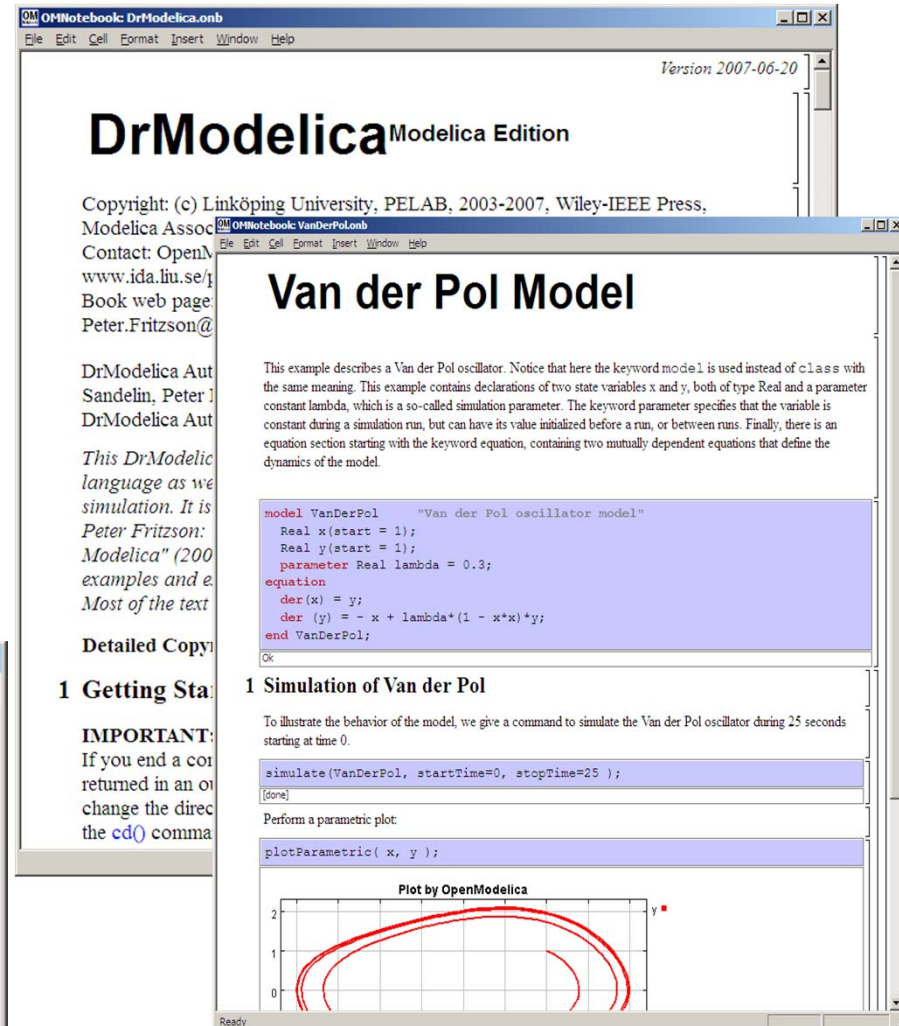

tmpPlot.plt

File Edit Special

Plot by OpenModelica

The plot shows a red curve representing the height h of a bouncing ball over time. The x-axis ranges from 0.0 to 3.0, and the y-axis ranges from 0.0 to 1.0. The curve starts at (0, 1.0), reaches a minimum of 0.0 at approximately t=0.4, and then exhibits damped oscillations, with each subsequent peak being lower than the previous one, eventually settling near 0.0.

OMNotebook: DrModelica.onb

File Edit Cell Format Insert Window Help

Version 2007-06-20

DrModelica^{Modelica Edition}

Modelica Assoc. [OMNotebook: VanDerPol.onb](#)
Contact: OpenModelica
www.ida.liu.se/projects/om/
Book web page:
Peter.Fritzson@liu.se

DrModelica Author: Peter Sandelin, Peter Fritzson
DrModelica Author: Peter Fritzson

This DrModelica language as we use it is a simulation. It is based on the Modelica language (2003 examples and extensions). Most of the text is from the Modelica language.

Detailed Copy: [Modelica Language](#)

1 Getting Started

IMPORTANT: If you end a cell with a return key, the cell is returned in an orange color. To change the direction of the plot, use the `cd()` command.

1 Simulation of Van der Pol

To illustrate the behavior of the model, we give a command to simulate the Van der Pol oscillator during 25 seconds starting at time 0.

```
simulate(VanDerPol, startTime=0, stopTime=25);
[done]
```

Perform a parametric plot:

```
plotParametric(x, y);
```

Plot by OpenModelica

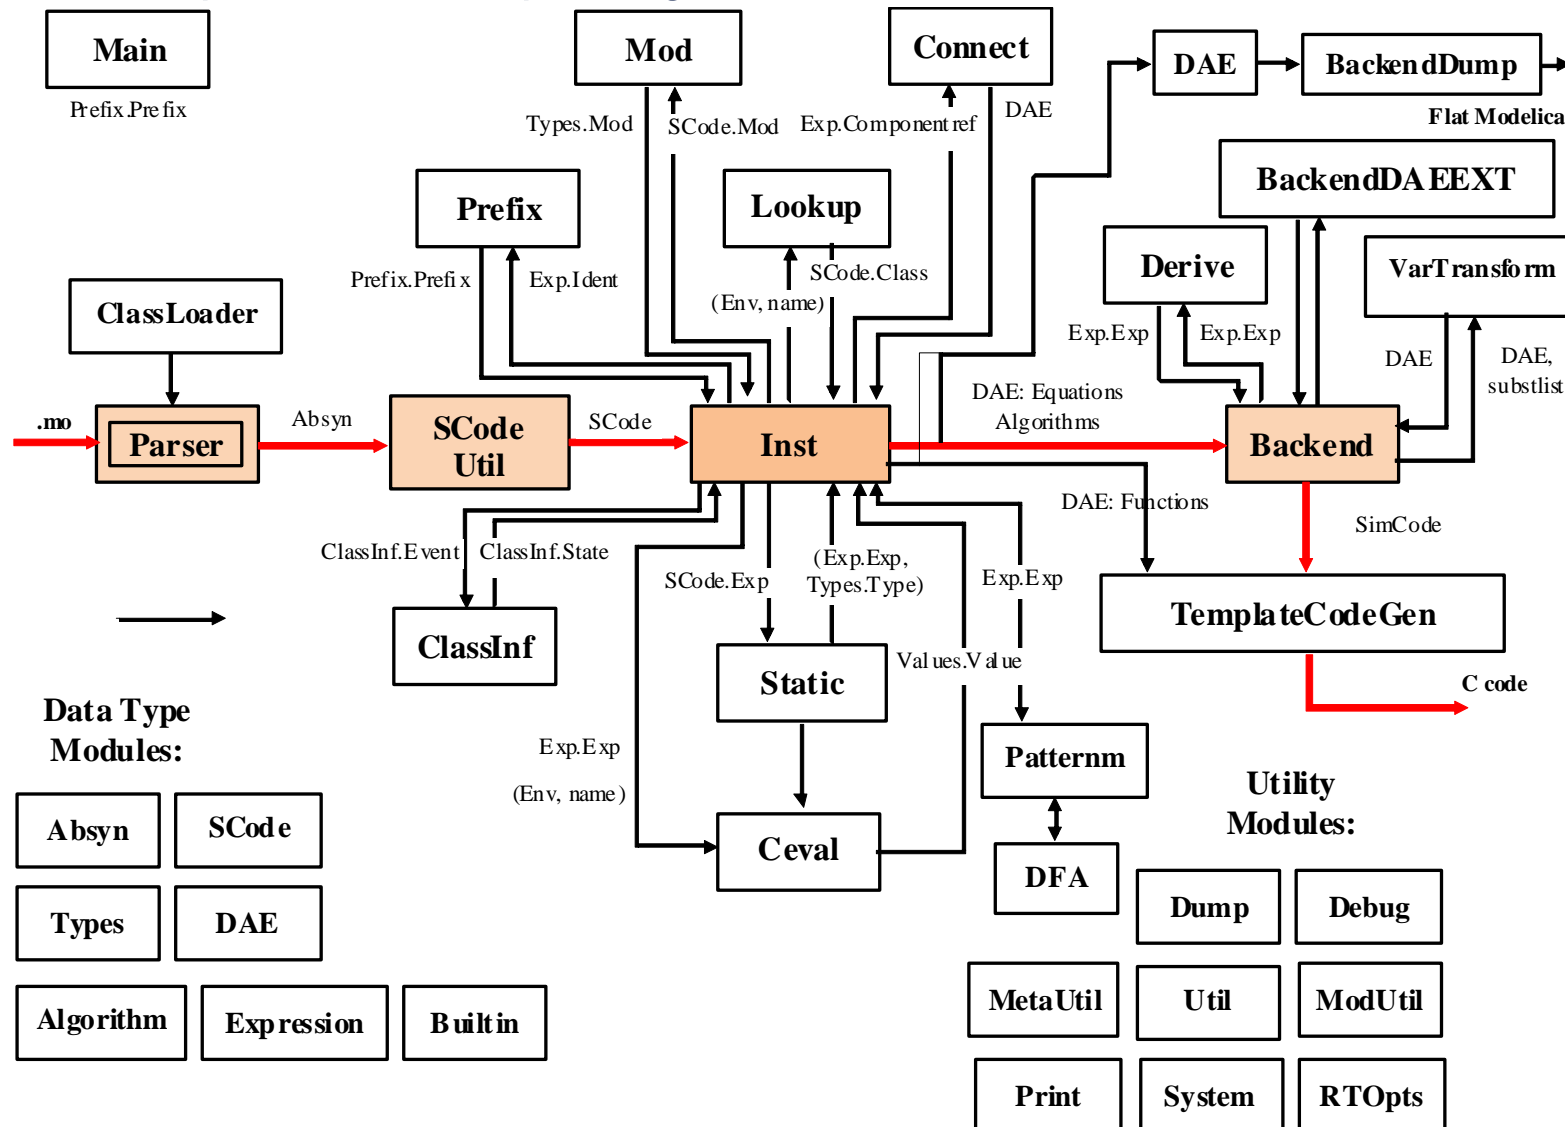

The parametric plot shows the trajectory of the Van der Pol oscillator in the x-y plane. The x-axis ranges from 0 to 2, and the y-axis ranges from 0 to 2. The trajectory is a closed, roughly elliptical loop, starting at (0, 0) and moving clockwise. The curve is red.

OMEdit - Demo? Maybe a movie!

The OMC Compiler

- Implemented mainly in MetaModelica and C/C++
- The compiler has 230 packages

Modelica->AST->SCode->DAE->C Code

```
// Parse the file and get an AST back
```

```
ast = Parse.parse(modelicaFile);
```

```
// Elaborate the file
```

```
scode = SCode.elaborate(ast);
```

```
// flatten the simplified code
```

```
(cache, dae1) = Inst.instantiate(Env.emptyCache, scode);
```

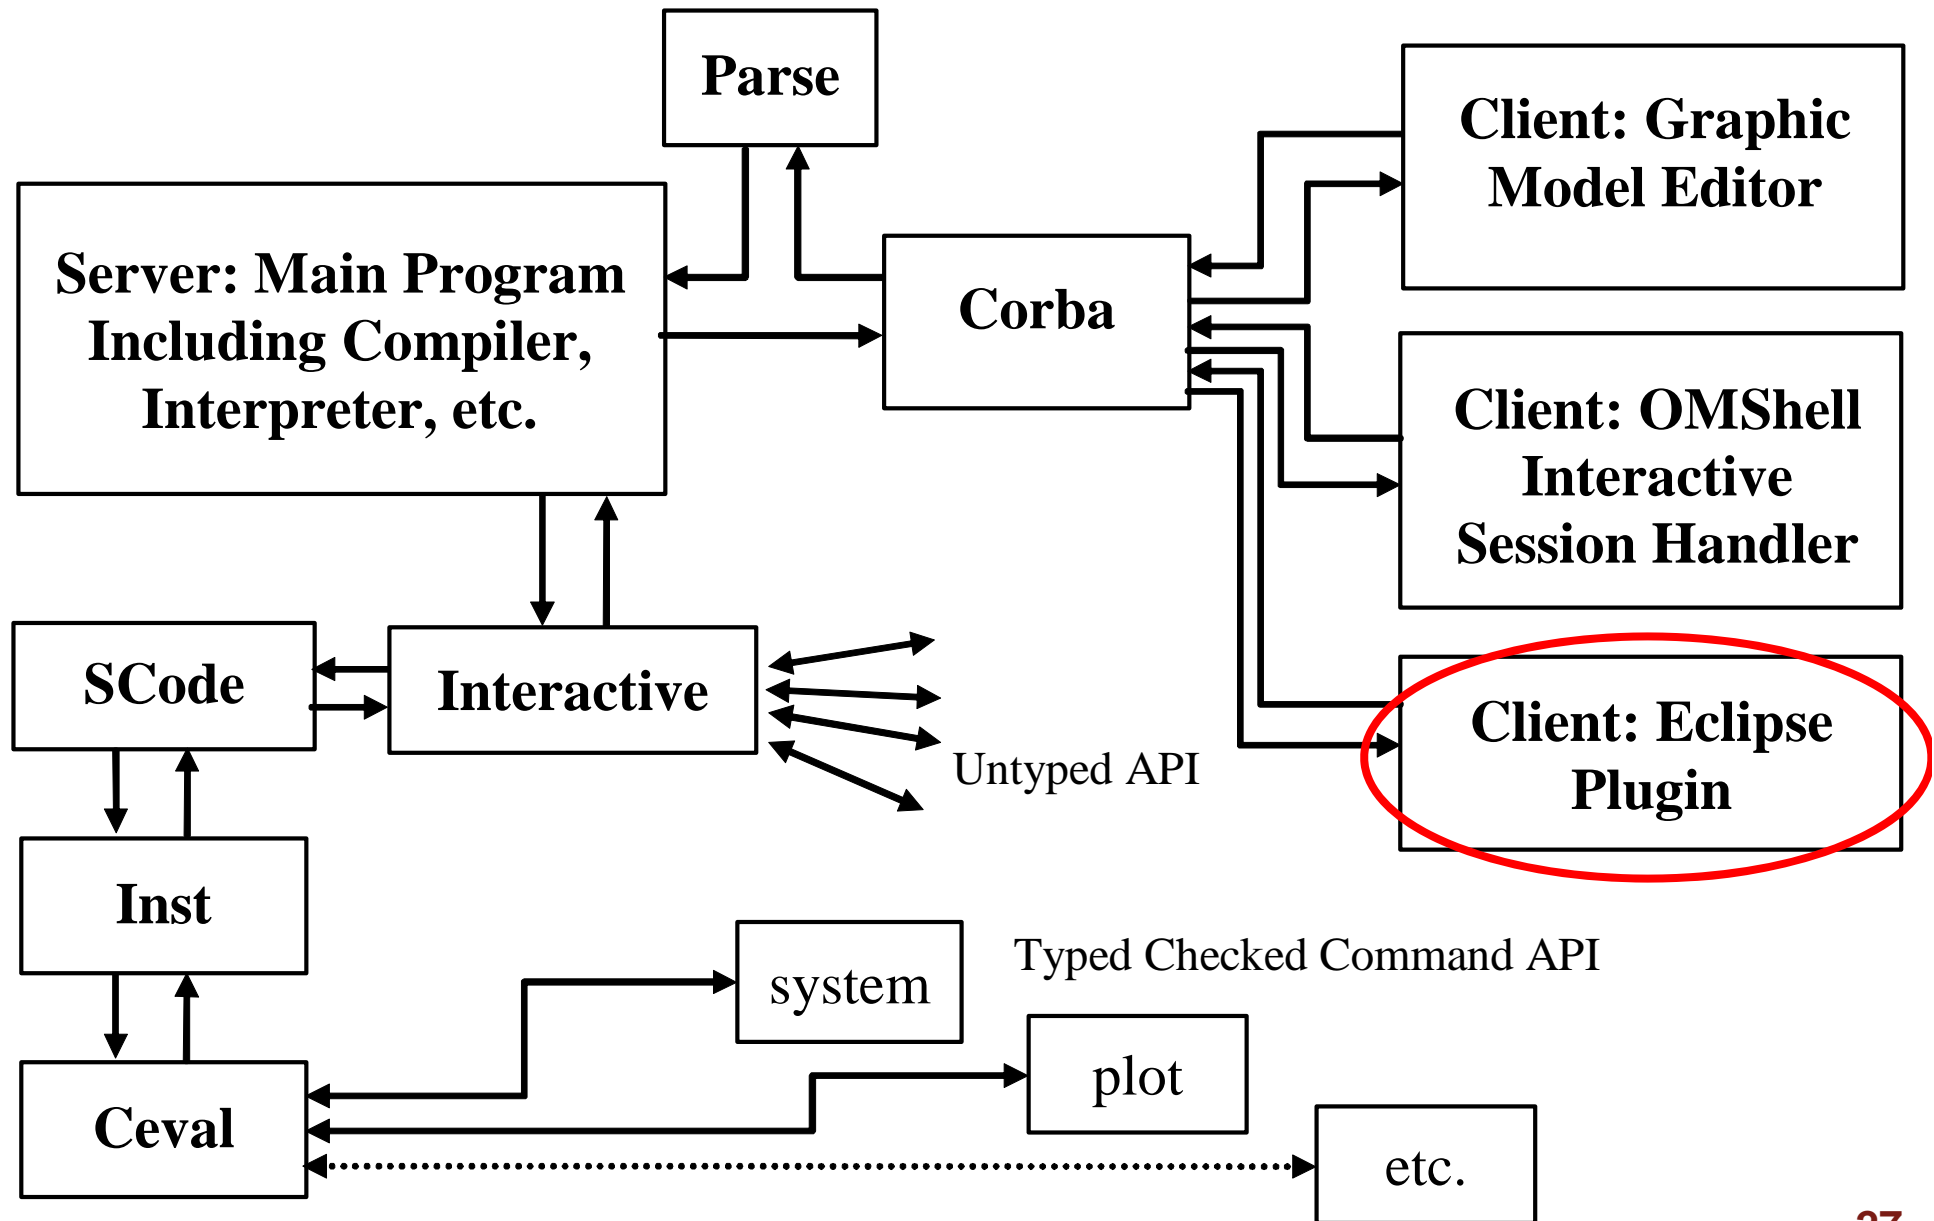

```
// Call the function that optimizes the DAE
```

```
optimizeDae(scode, ast, dae, dae, lastClassName);
```

The MDT Eclipse Environment (III)

Creating Modelica projects (I)

The screenshot illustrates the steps to create a Modelica project in Eclipse SDK. The main window shows the 'File' menu with 'New' selected, leading to a 'New Project...' dialog. In this dialog, the 'Modelica' folder is expanded, and the 'Modelica Project' wizard is selected. A red arrow points from the 'Modelica Project' entry in the wizard list to the 'New Modelica Project' dialog box. This dialog box has a title bar 'New Modelica Project' and a subtitle 'Create a Modelica project'. Below the subtitle, it says 'Create a Modelica project in the workspace.' There is a text field for 'Project name:' containing the text 'demo'. At the bottom of the dialog, there are navigation buttons: '< Back', 'Next >', 'Finish', and 'Cancel'. A second red arrow points from the 'Next >' button in the 'New Modelica Project' dialog to the 'Next >' button in the 'New Project' dialog.

Creation of Modelica projects using wizards

Creating Modelica projects (II)

Modelica project

Creating Modelica packages

The image shows the Eclipse SDK interface for creating a new Modelica package. The 'New' menu is open, and the 'Modelica Package' option is selected. The 'New Modelica Package' wizard is displayed, with the following fields:

- Source folder: demo
- Package: (empty)
- Name: MyPackage
- Description: A Modelica Package
- is encapsulated package

The 'Finish' button is highlighted with a red arrow. A blue callout box on the left contains the text 'Creation of Modelica packages using wizards'.

Creating Modelica classes

The image shows the Eclipse IDE interface for creating a Modelica class. On the left, the 'Modelica Projects' view shows a project named 'demo' with a sub-package 'MyPackage'. A context menu is open over 'MyPackage', and the 'New Modelica Class' option is selected. The 'New Modelica Class' wizard dialog is displayed in the foreground, with the following fields and options:

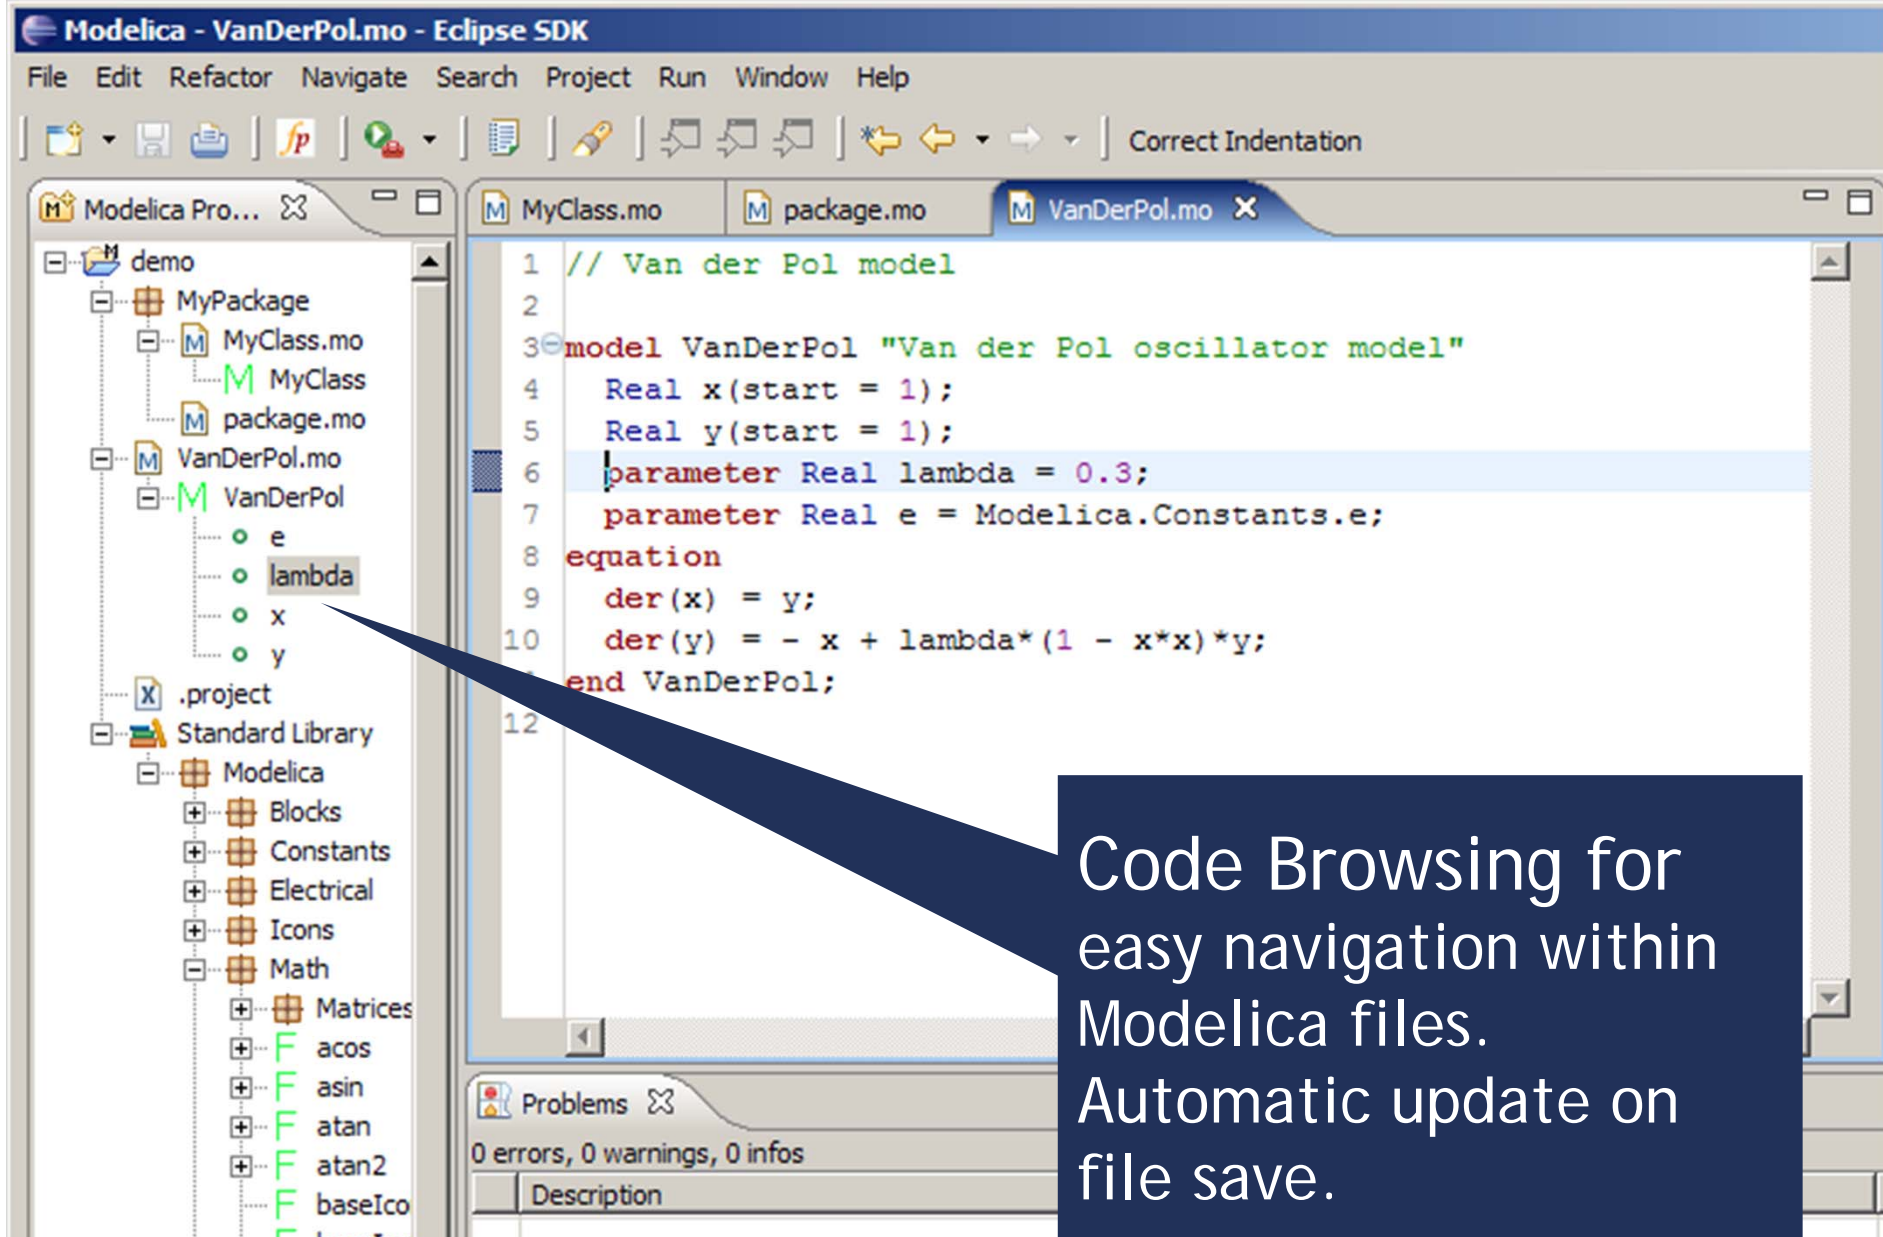

- Source folder: demo/MyPackage
- Package: MyPackage
- Name: MyClass
- Restriction: model
- Modifiers: include initial equation block, is partial class, have external body

The 'Finish' button is highlighted with a red arrow. On the right, the 'MyClass.mo' editor shows the generated code:

```
1 within MyPackage;  
2  
3 model MyClass  
4  
5 equation  
6  
7 end MyClass;
```

Creation of Modelica classes, models, etc, using wizards

Code browsing

The screenshot shows the Eclipse IDE interface with the title bar "Modelica - VanDerPol.mo - Eclipse SDK". The menu bar includes File, Edit, Refactor, Navigate, Search, Project, Run, Window, and Help. The toolbar contains icons for file operations and editing, with "Correct Indentation" visible. The left sidebar shows a project tree for "demo" with folders "MyPackage" and "VanDerPol", and sub-files "MyClass.mo", "package.mo", "VanDerPol.mo", "e", "lambda", "x", and "y". The "lambda" file is selected. The main editor displays the code for "VanDerPol.mo" with line numbers 1 to 12. The code is as follows:

```
1 // Van der Pol model
2
3 model VanDerPol "Van der Pol oscillator model"
4   Real x(start = 1);
5   Real y(start = 1);
6   parameter Real lambda = 0.3;
7   parameter Real e = Modelica.Constants.e;
8 equation
9   der(x) = y;
10  der(y) = - x + lambda*(1 - x*x)*y;
11 end VanDerPol;
12
```

A blue callout box with white text points to the "lambda" parameter in the code and the "lambda" entry in the project tree. The text in the callout box reads: "Code Browsing for easy navigation within Modelica files. Automatic update on file save." The bottom status bar shows "Problems" with "0 errors, 0 warnings, 0 infos" and a "Description" tab.

Error detection (I)

The screenshot shows the Eclipse IDE with the following code in the editor:

```
1 // Van der Pol model
2
3 model VanDerPol "Van der Pol oscillator model"
4   Real x(start = 1);
5   Real y(start = 1);
6   arameter Real lambda = 0.3;
7   parameter Real e = Modelica.Constants.e;
8 equation
9   der(x) = y;
10  der(y) = - x + lambda*(1 - x*x)*y;
11 end VanDerPol;
12
```

The Problems view at the bottom shows the following error:

Description	Resource	In Folder	Location
unexpected token: lambda, parsing resumed at token ';' on line 6, column 29	VanDerPol.mo	demo	line 6

Parse error
detection on
file save

Error detection (II)

The screenshot shows the Eclipse IDE interface for the Modelica project. The left sidebar displays a project tree with folders like 'Compiler', 'absyn_builder', 'doc', etc., and files like 'Absyn.mo'. The main editor window shows the source code for 'Absyn.mo' with the following content:

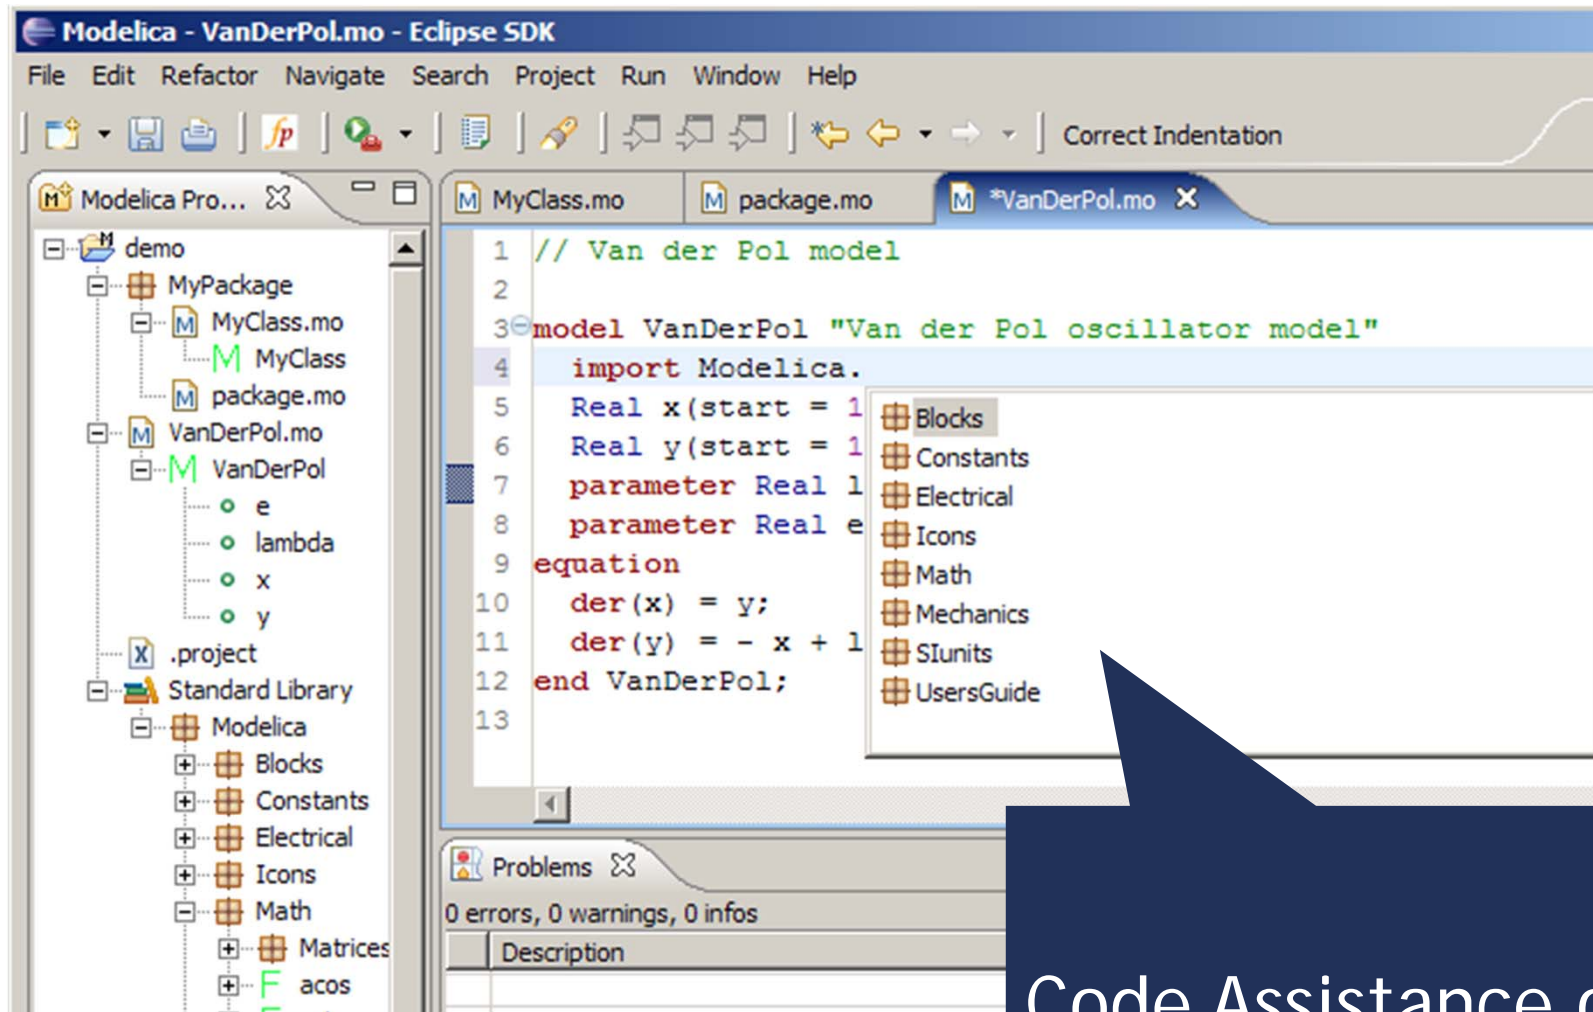

```
69 public
70 uniontype Program "- Programs, the top level construct
71   A program is simply a list of class definitions declared at top
72   level in the source file, combined with a within statement that
73   indicates the hieractical position of the program.
74 "
75 record PROGRAM
76   list<Class> classes "classes ; List of classes" ;
77   Withi within_ "within ; Within statement" ;
78 end PROGRAM;
79
```

The 'Problems' window at the bottom shows the compilation output, including the following error message:

```
<terminated> OMDev-MINGW-OpenModelicaBuilder [Program] c:\OMDev\tools\msys\bin\make.exe
cp -p ../Static.mo Static.mo
cp -p ../SimCodegen.mo SimCodegen.mo

cp -p ../System.mo System.mo
/c/OMDev//tools/rml/bin/rmlc -v -Wc,-O3 -c Absyn.mo
"/c/OMDev//tools/rml//bin/rml" -Eplain Absyn.mo
Absyn.mo:77.5-77.9 Error: unbound type constructor Withi
Error: StaticElaborationError
make[2]: Leaving directory `~/c/bin/mingw/home/...
make[1]: Leaving directory `~/c/bin/cy...
make[2]: *** [Absyn.h] Error 1
make[1]: *** [omc_release] Error 2
make: *** [omc] Error 2
```

A blue callout box with a white arrow points to the error message in the console, containing the text: "Semantic error detection on compilation".

Code assistance (I)

Code Assistance on imports

Code assistance (II)

The screenshot shows the Eclipse IDE with the following components:

- Project Explorer:** Shows a project named 'demo' containing a package 'MyPackage' with files 'MyClass.mo', 'package.mo', and 'VanDerPol.mo'. The 'VanDerPol' class is expanded to show parameters 'e', 'lambda', 'x', and 'y'.
- Editor:** Displays the code for 'VanDerPol.mo'. The current line is `parameter Real e = Modelica.Constants.`. A dropdown menu is visible, listing constants from the 'Modelica.Constants' package, with 'e' selected.
- Code:**

```
1 // Van der Pol model
2
3 model VanDerPol "Van der Pol oscillator model"
4   import Modelica.Math;
5   Real x(start = 1);
6   Real y(start = 1);
7   parameter Real lambda = 0.3;
8   parameter Real e = Modelica.Constants.
9 equation
10  der(x) = y;
11  der(y) = - x + lambda*(1 - x*x)*y;
12 end VanDerPol;
13
```
- Problems View:** Shows '0 errors, 0 warnings, 0 infos'.
- Table:** A table with columns 'Description', 'Resource', 'In Folder', and 'Location' is partially visible at the bottom.

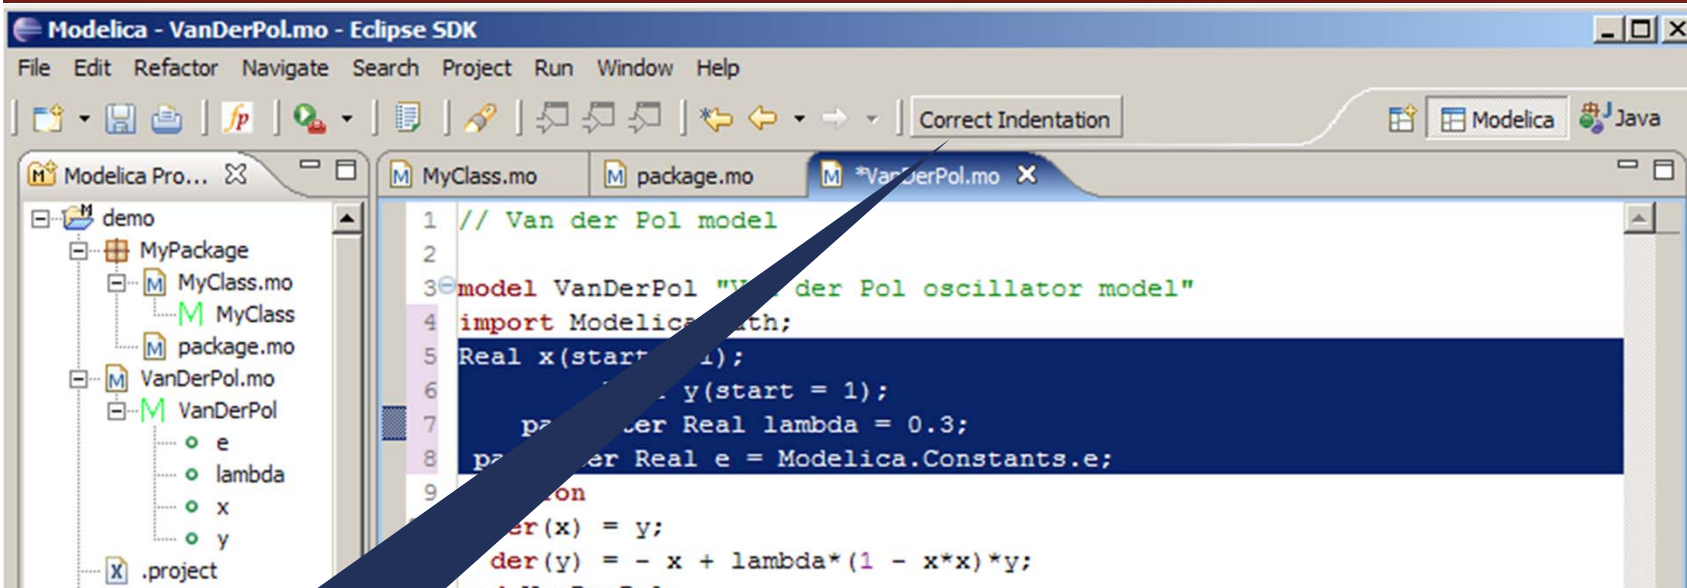

Code Assistance on assignments

Code assistance (III)

Code Assistance on
function calls

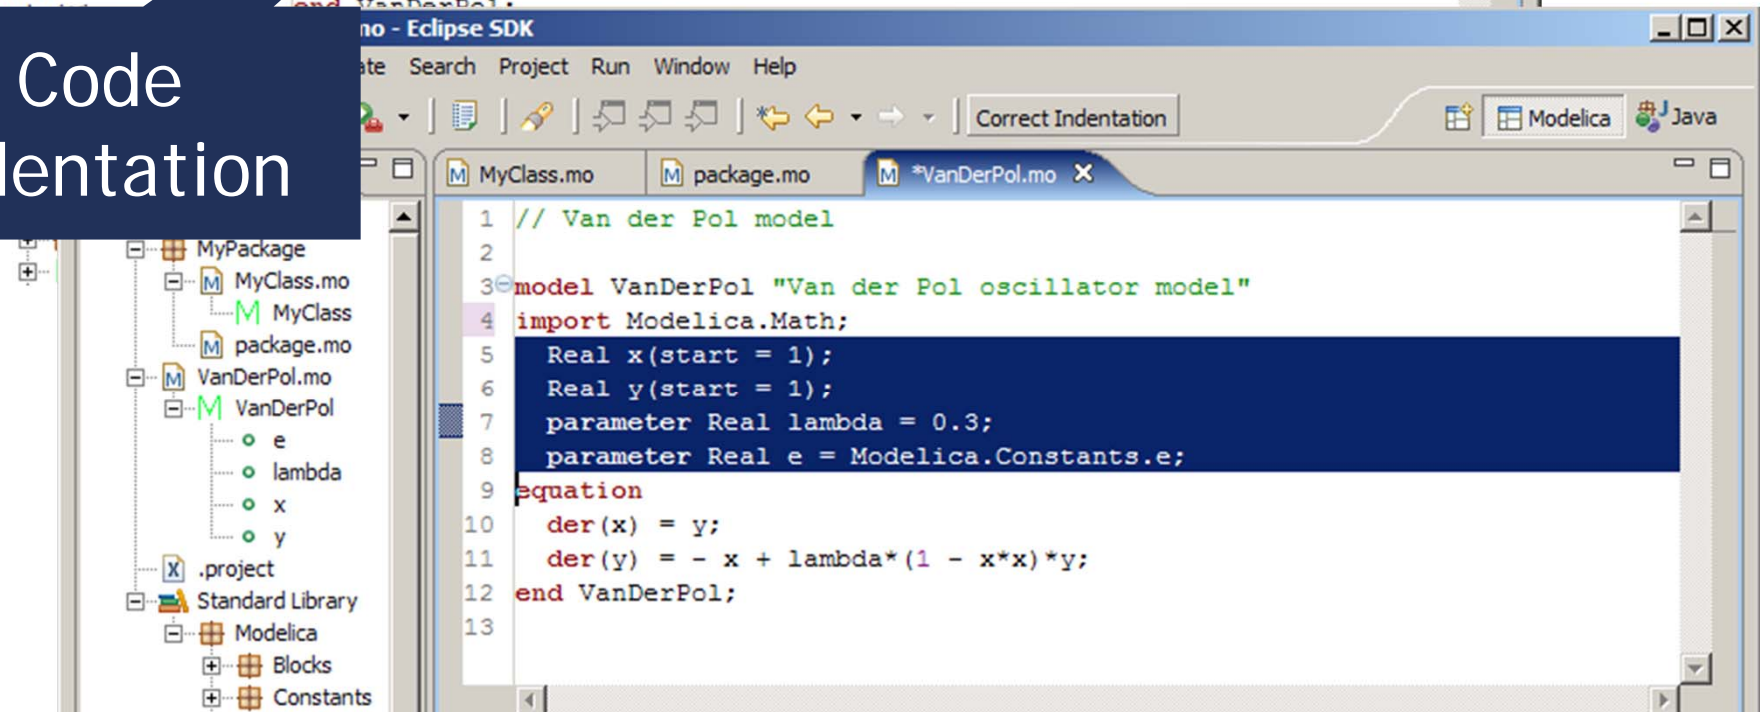

Code indentation

Modelica - VanDerPol.mo - Eclipse SDK

6   Real y(start = 1);
7   parameter Real lambda = 0.3;
8   parameter Real e = Modelica.Constants.e;
9 equation
10   der(x) = y;
11   der(y) = - x + lambda*(1 - x*x)*y;
12 end VanDerPol;
13
```

Code Outline and Hovering Info

The screenshot displays the Eclipse IDE interface for the Modelica project. The main editor shows the `Absyn.mo` file with the following code:

```
case (MATRIX(matrix = exp11))
  local list<list<list<ComponentRef>>> res1;
  equation
    res1 = Util.listListMap(exp11, getCrefFromExp);
    res2 = Util.listFlatten(res1);
    res = Util.listFlatten(res2);
  then
    res;
case (RANGE(start = e1, step = SOME(e3), stop = e2))
  equation
    l1 = getCrefFromExp(e1);
    l2 =
      function getCrefFromExp "function: getCrefFromExp
        Returns a flattened list of the
        component references in an expression"
        input Exp inExp;
        output list<ComponentRef> outComponentRefLst;
      then
        algorithm
          outComponentRefLst:=matchcontinue inExp
          local
            ComponentRef cr;
            then

```

Annotations in the image include:

- Code Outline for easy navigation within Modelica files:** A callout box points to the Outline view on the left, which lists the structure of the `Absyn` module, including various algorithmic constructs like `ADD`, `ALG_ASSIGN`, `ALG_BREAK`, `ALG_CATCH`, `ALG_EQUALITY`, `ALG_FAILURE`, `ALG_FOR`, `ALG_GOTO`, `ALG_IF`, `ALG_LABEL`, `ALG_NORET_CALL`, `ALG_RETURN`, `ALG_THROW`, `ALG_TRY`, and `ALG_WHEN_A`.
- Identifier Info on Hovering:** A callout box points to the `getCrefFromExp` function definition, which is highlighted in yellow. The tooltip text reads: "function: getCrefFromExp Returns a flattened list of the component references in an expression".

The Problems view at the bottom shows 113 errors, 0 warnings, and 0 infos. The error messages are:

- The identifier at start and end are different
- The identifier at start and end are different
- The identifier at start and end are different, par

The status bar at the bottom indicates 64M of 254M memory usage and a Ctrl Contrib (Bottom) button.

Eclipse Debugging Environment

- Type information for all variables
- Browsing of complex data structures
- GDB based

The screenshot displays the Eclipse IDE interface during a debugging session. The top panel shows the 'Debug' toolbar with various execution controls. Below it, the 'Breakpoints' and 'Variables' panels are visible. The 'Variables' panel shows a tree view of the current variable 'p' of type 'Absyn.Program', with its value expanded to show a list of class parts and their attributes. The 'Console' panel shows the output of the program, including the path to the executable. The 'Outline' panel shows the project structure, with the 'translateFile' method highlighted. The code editor at the bottom shows the source code of the 'Bla.mo' file, with the current line of code highlighted.

Name	Value	Declared Type

OMEdit Debugging Environment

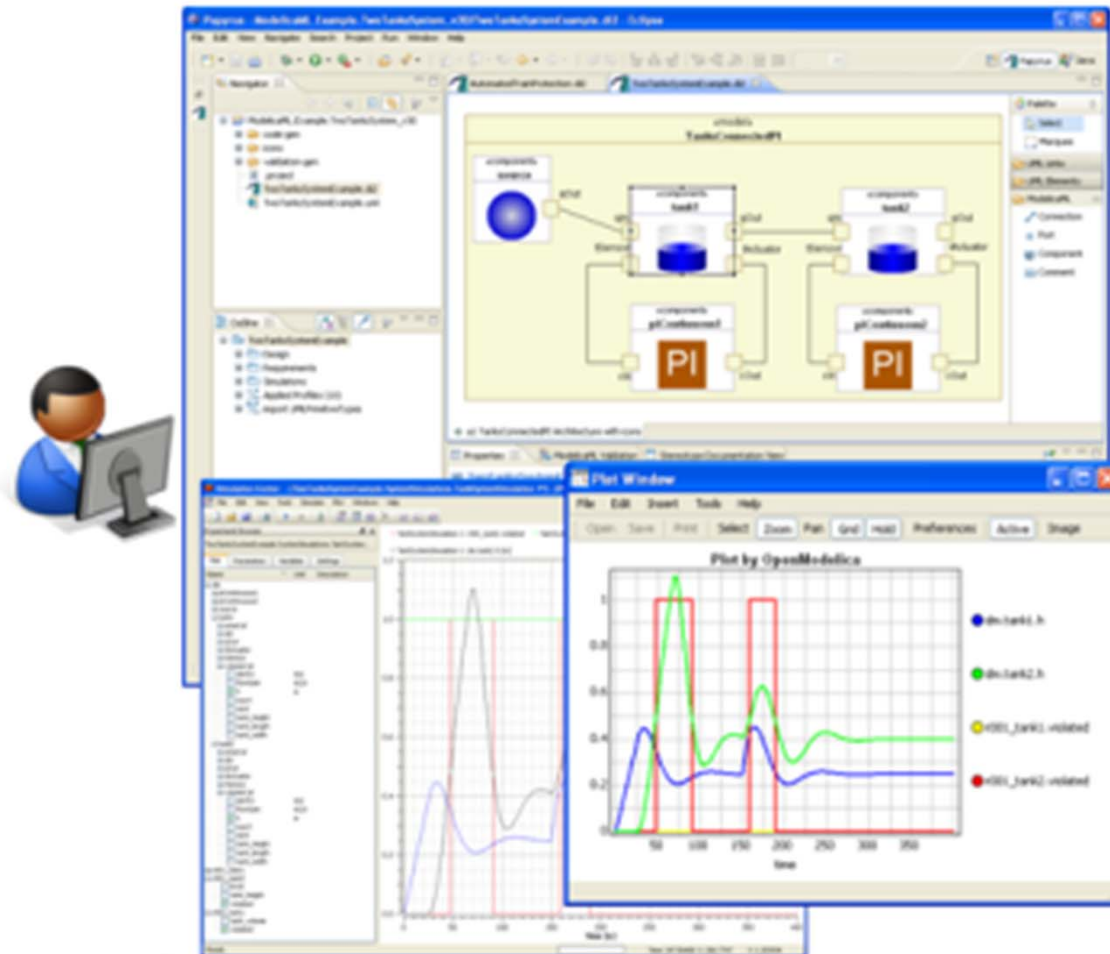

The screenshot displays the OMEdit - Transformational Debugger interface. The main window title is "OMEdit - Transformational Debugger" and the file path is "C:/Users/adeas31/AppData/Local/Temp/OpenModelica/OMEdit/Debugging.SolverFailure.NonlinearSolverSimulation_info.xml".

The interface is divided into several panes:

- Variables:** Contains a "Variables Browser" with search options (Case Sensitive, Regular Expression) and "Expand All" / "Collapse All" buttons. Below it is a table of variables with columns: Variables, Comment, Line, and Location. The table lists variables A, Kv, T0, T1, and Tref.
- Defined In Equations:** A table with columns: Index, Type, and Equation. It shows two entries for index 1 and 28, both of type "initial" and "parameter", with the equation "(assignment) ...* (T0 - Tref)".
- Used In Equations:** A table with columns: Index, Type, and Equation. It shows two entries for index 1 and 28, both of type "initial" and "parameter", with the equation "(assignment) ...* (T0 - Tref)".
- Equations:** Contains an "Equations Browser" with columns: Index, Type, and Equation. It lists 10 equations, with equation 8 highlighted as "initial (nonlinear)".
- Defines:** A table with columns: Variable and Value. It shows "h0" defined as "cp * (T0 - Tref)".
- Depends:** A table with columns: Variable and Value. It shows "h0" depending on "cp", "T0", and "Tref".
- Equation Operations:** A table with columns: Operations and Value. It shows "solved: h0 = cp * (T0 - Tref)" for two different operations.
- Source Browser:** Displays the source code for "C:/Users/adeas31/Desktop/Debugging.mo". The code includes comments and assignments for variables like "enthalpy computation", "SI.SpecificHeatCapacity cp=4186", "SI.MassFlowRate w_pump", "SI.Pressure p1", "SI.Pressure p2", "SI.Pressure dp_pump", "SI.Pressure dp_valve", "Real sqrt_dp", "SI.SpecificEnthalpy h0", "SI.SpecificEnthalpy h1", "SI.Power W", "SI.Length y", "Real eta", "SI.Temperature T1", "SI.Time tau", and "equation dp_pump = p1 - patm".

Eclipse environment for ModelicaML

① System Modeling with ModelicaML

② Modelica Code Generation

```
1 // Modelica

③ System Simulation with Modelica Tools

- Tutorial tomorrow at ModProd 2014!

- OpenModelica
 - What is OpenModelica?
 - The past
- OpenModelica Technical Overview
 - OMC, OMShell, OMNotebook
- OpenModelica Development Environment
 - MetaModelica
 - The Eclipse Environment
- OpenModelica Latest Developments (2013-2014)

Latest Developments (2013-2014)

2013 - 2014 - Most focus on libraries support & performance

- MSL 3.2.1 (98% build/90% simulate), ModelicaTest 3.2.1, PetriNet, Buildings, PowerSystems, OpenHydraulics, ThermoPower, and ThermoSysPro
- AVM project - FANG Darpa competition
- **Front-end & Back-end & Simulation Runtime**
 - New instantiation module (Lookup, Flattening, Connection Handling) - continued work
 - Further back-end improvements
 - FMI support
 - Several Simulation Runtimes (C, C++, C#, Java, XML, Adevs, QSS, FMU, JS)
 - OMEdit - Improvements & Integrated debugging support
 - Compiler support for optimization
 - Automatic differentiation of algorithms and functions
 - HpCom - parallelization of model code
 - Backend redesign for improved scalability and memory
 - Bootstrapping OMC improvements, separate compilation, ready for wide use
 - Simulating models in the browser
- **General**
 - ModelicaTest compliance testsuite for Modelica Association
 - 3195 commits in subversion from 2013 to Feb. 4, 2014
 - Bug fixes
 - Release 1.9.1 (Linux, Mac, Windows)

Latest Developments (2013-2014)

- **Front-end issues in works since 1.9.0**
 - support for calling function via instance (MultiBody, VehicleDynamics, PowerTrain)
world.gravityAcceleration(...)
 - handle same type with different redeclares (Media & Fluid)
T x1(redeclare function f = f1)
T x2(redeclare function f = f2)
 - better support for package constants (ExternalMedia, Media & Fluid)
 - fix remaining redeclare issues (Media.Examples.R134*)
 - support for querying the instance of a flattened model
needed for OMEdit handling of model structure
 - support for choicesAllMatching annotation (subtyping relationship of models/comps)
needed for OMEdit handling of replaceable components/models
 - scalability & performance
basically do things once and not several times
separate lookup, modifier application, typing, array expansion, equation & connection handling, etc.

Thank You!
